

Cross Platform Application Development

Step 1: Set Up Back4App

Sign Up for Back4App Account.

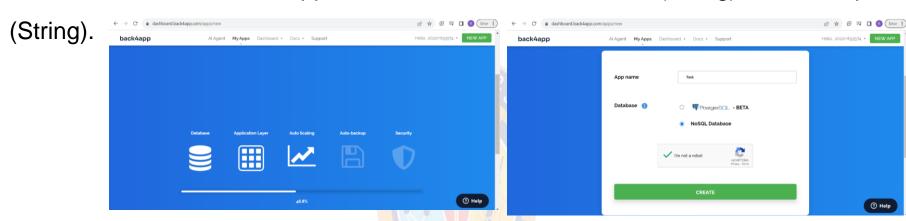

- Login to the Back4App account
- Create a new Back4App app.

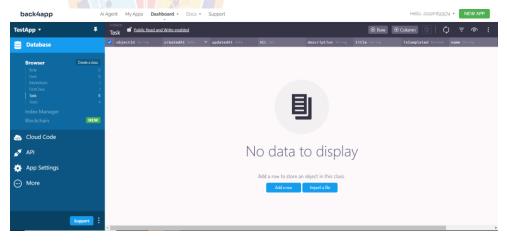

Step 1: Set Up Back4App.

Create a class in Back4App named Task with columns title (String) and description

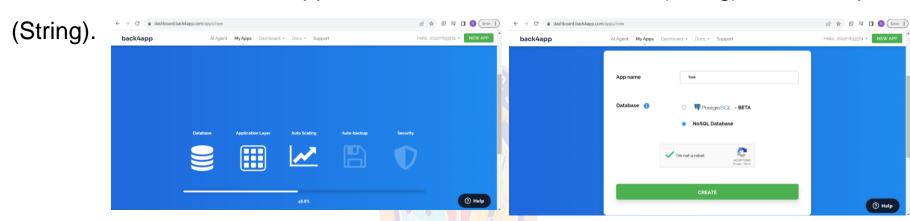

Navigating on Back4App
 Dashboard

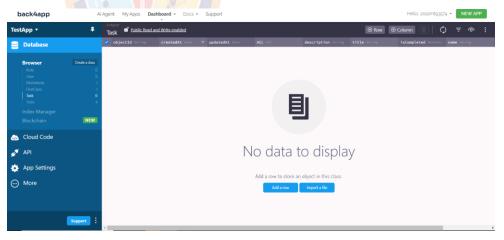

Step 2: Connect to Back4App

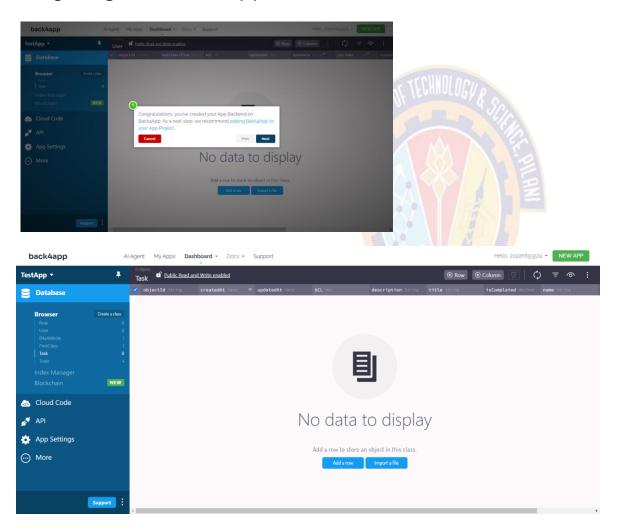

Create a class in Back4App named Task with columns title (String) and description

Navigating on Back4App
 Dashboard

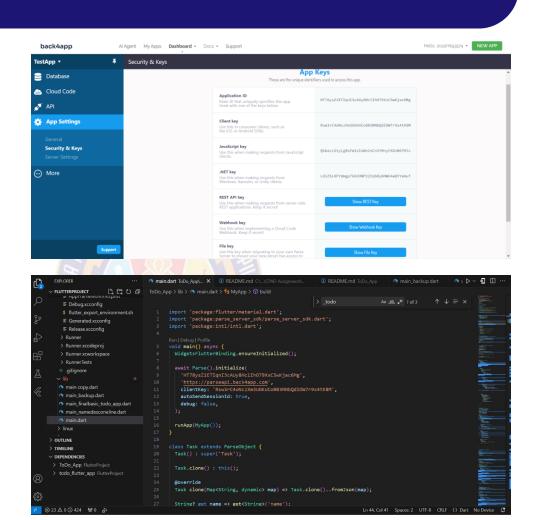

Navigating on Back4App Dashboard

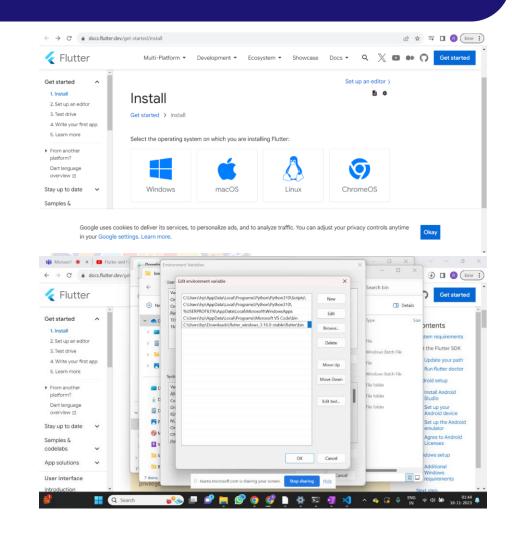

Connect App frontend to Back4App

 Click on App Settings and copy the Application ID, and client key to check App Keys which will be necessary to connect your App frontend to Back4App.

Flutter Setup

- Step 1: Install Flutter.
- Step 2: Add the path of flutter application to the environment variables.
- Step 3: Create a new Flutter project.
- Step 4: Add the required dependencies to your pubspec.yaml file.
- Step 5: Initialize the Parse SDK in your Flutter app.

- Step 6: Install Parse SDK
- Step 7: Create a flutter project.

flutter create todo_flutter_app

 Step 8: Check if everything is OK running the application.

cd todo_flutter_app
flutter run

- Step 9: Installing Flutter plugin for Parse Server
- Step 10: Go to pubspec.yaml and add the following:

dependencies:

parse_server_sdk_flutt
er: ^latest_version

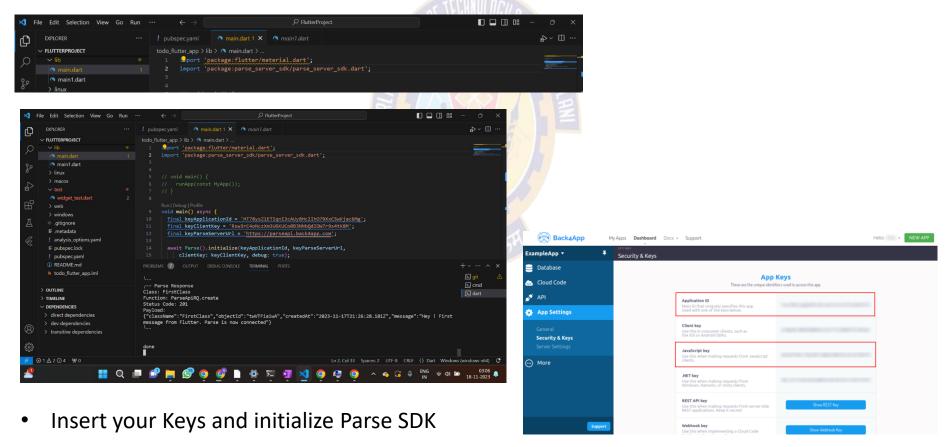

Step 2: Flutter Setup

Setting up Parse SDK: In main.dart code import the Parse SDK

import 'package:flutter/material.dart';

import 'package:parse_server_sdk_flutter/parse_server_sdk.dart';

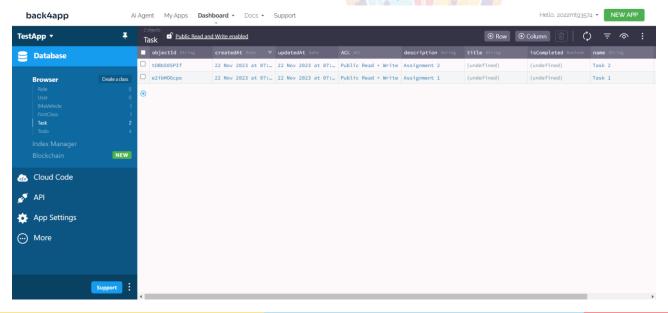

Step 12: Save and Read your first Data Object

```
Future<void> _addTask(String name, String description) async {
  final Task newTask = Task()
    ..name = name
    ..description = description;

await newTask.save();

_taskController.clear();
  _descriptionController.clear();
  _fetchTasks();
}
```

Step 5 - Go to Dashboard and check your Data

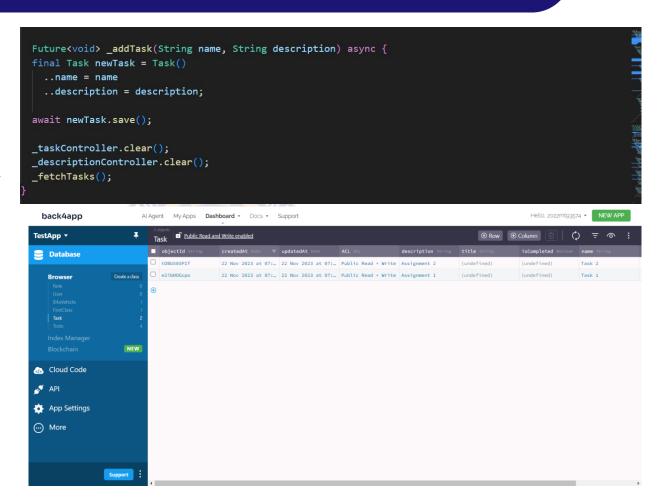

Step 3: Task Creation

Create a screen for adding new tasks.

Implement functionality to create and save tasks to Back4App.

Verify that newly created tasks appear in the task list.

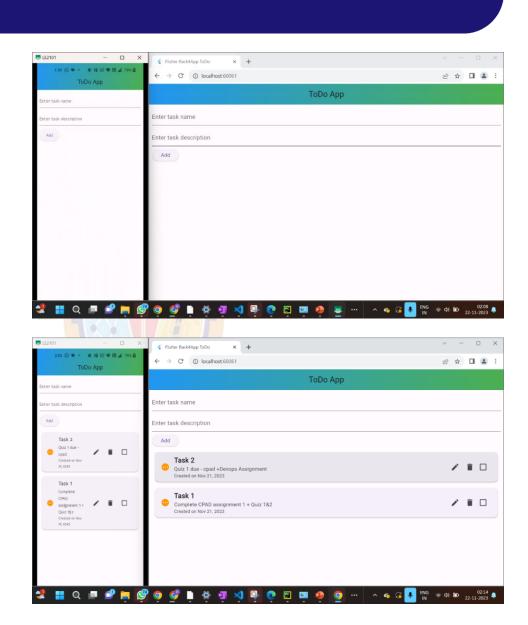

Step 3: Task Creation

Create a screen for adding new tasks.

Implement functionality to create and save tasks to Back4App.

Verify that newly created tasks appear in the task list.

- The image shows the page to add new tasks by adding the task name, task description and clicking on the Add button.
- The tasks created are updated both in the task details page and in Back4App

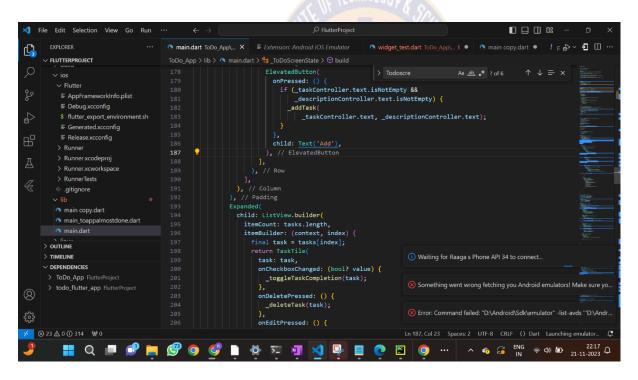

Step 4: Task List

Create a screen in your Flutter app to display a list of tasks.

Implement a function to fetch tasks from Back4App using the Back4App API.

Display the tasks in a list view with titles and descriptions.

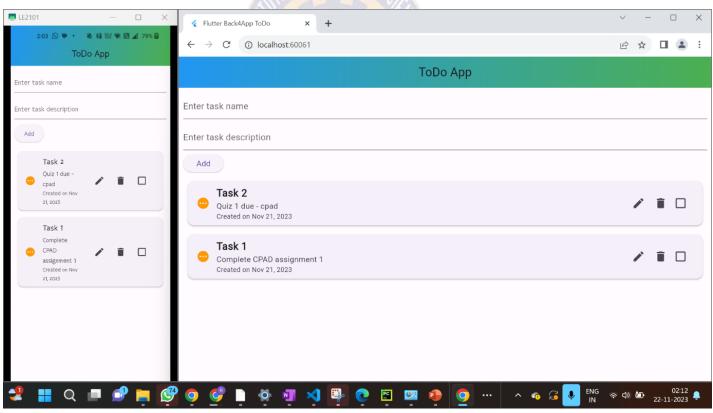

Step 4: Task List

Create a screen in your Flutter app to display a list of tasks.

Implement a function to fetch tasks from Back4App using the Back4App API.

Display the tasks in a list view with titles and descriptions.

Once the tasks are added, the added tasks can be viewed in the task list in the form of tiles

Task Details

Step 5: Task Details

Add a feature to view task details when a task is tapped in the task list.

Display the title and description of the selected task.

```
ToDo App > lib > nain.dart > art > TaskDetailsScreen > build

∨ FLUTTERPROJECT

                                                                                                           > task deta
                                                                                                                                    Aa ab * 1 of 1
           ■ Debug.xcconfig
                                                   class TaskDetailsScreen extends StatelessWidget {
          $ flutter_export_environment.sh
                                                     final Task task:

    ■ Generated.xcconfig

          ■ Release.xcconfig
                                                     TaskDetailsScreen({required this.task});
         > Runner
         > Runner.xcodeproj
         > Runner.xcworkspace
                                                     Widget build(BuildContext context) {
                                                        return Scaffold(
         > RunnerTests
                                                          appBar: AppBar(
         .gitignore
A
                                            399
                                                            title: Text('Task Details'),
         main copy.dart
                                                          body: Padding
         main_backup.dart
                                                           padding: const EdgeInsets.all(16.0),
         main_finalbasic_todo_app.dart
                                                            child: Column(
                                                              crossAxisAlignment: CrossAxisAlignment.start,
         main_namedesconeline.dart
                                                              children:
         main.dart
                                                                Text(
        > linux
                                                                   'Task Name:',
                                                                  style: TextStyle(fontSize: 16, fontWeight: FontWeight.bold),
     > OUTLINE
     > TIMELINE
                                                                Text(

∨ DEPENDENCIES

                                                                  task.name ?? '',
       > ToDo_App FlutterProject
                                                                  style: TextStyle(fontSize: 18),
       > todo_flutter_app FlutterProject
(8)
                                                                SizedBox(height: 16),
                                                                Text(
                                                                   'Task Description:',
```

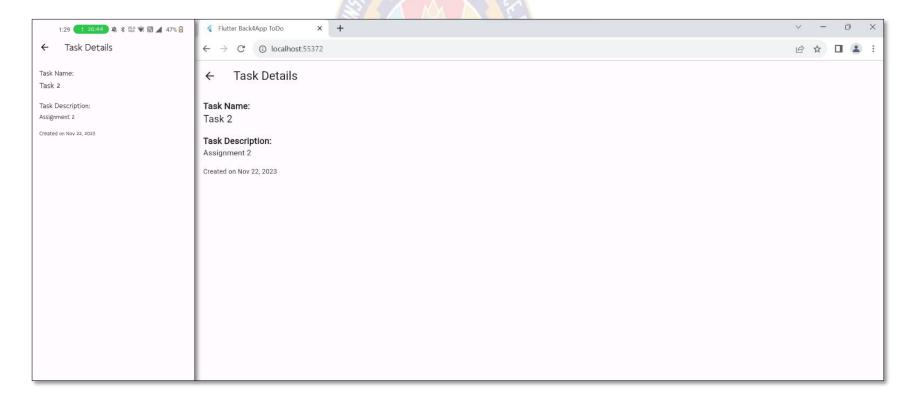

Task Details

Step 5: Task Details

Add a feature to view task details when a task is tapped in the task list.

Display the title and description of the selected task.

 This page is to view the task details. The task details can be viewed on tapping on the task tile.

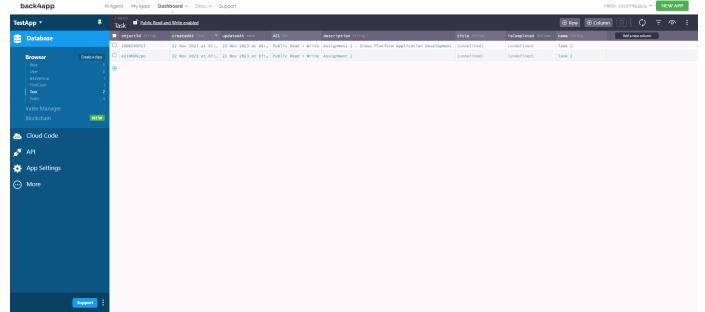

Bonus Feature – Edit Task

Step 6: Bonus Features

Add a feature to edit and update existing tasks.

```
void _updateTask() async {
  widget.task.name = _nameController.text;
  widget.task.description = _descriptionController.text;
  await widget.task.save();
  Navigator.pop(context, true); // Pass true to indicate task was updated
}
```

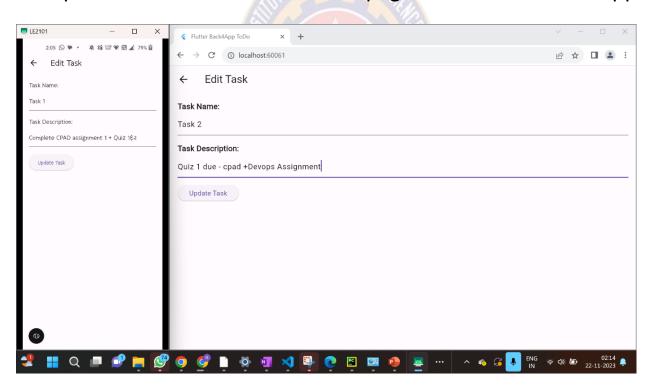

Bonus Feature – Edit Task

Step 6: Bonus Features

Add a feature to edit and update existing tasks.

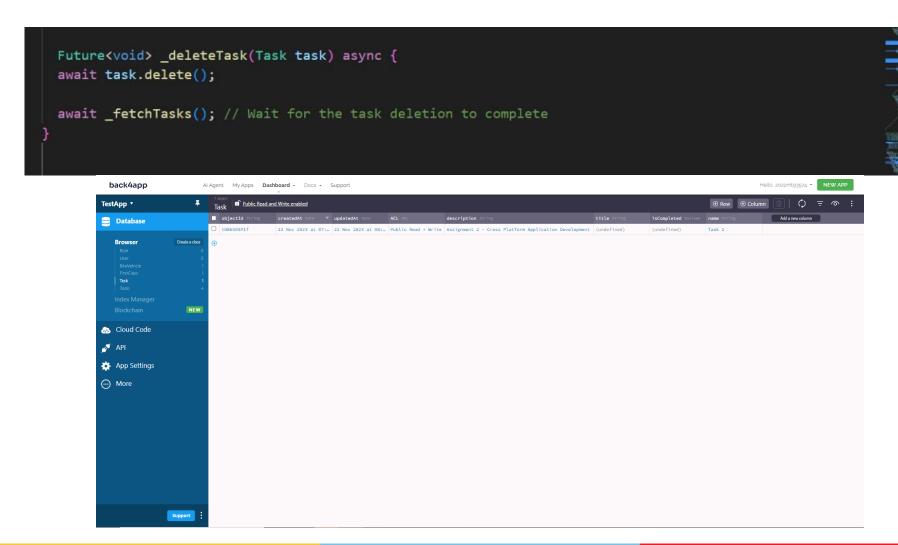

- In order to edit the task, click on the edit icon in the task tiles.
- Edit task page opens in which the task name and task description can be edited.
- This will be updated in both the task details page as well as in Back4App

Bonus Feature – Delete Task

Step 6: Bonus Features

Implement a feature for task deletion.

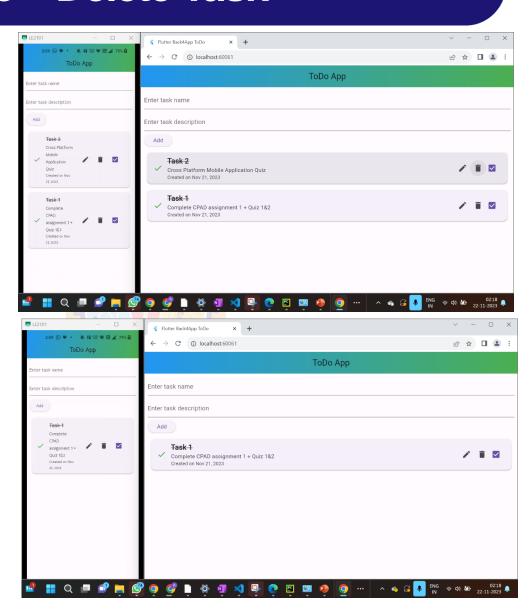

Bonus Feature – Delete Task

Step 6: Bonus Features

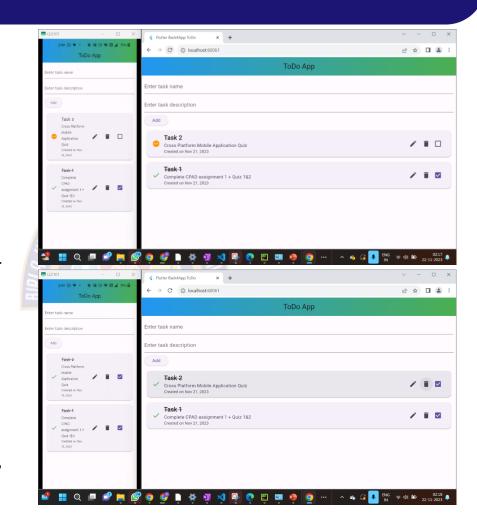

Implement a feature for task deletion.

- To delete the task click on the delete button in the task tiles. The task gets deleted from the task details as well as the Back4App.
- The task can also be deleted by long press on the task tiles in the task list.

Enhancements

- 1. Added an additional feature/enhancement to mark the tasks as completed. When a task is incomplete, a symbol is shown at the beginning of the task indicating that the task is incomplete. When the checkbox is checked, the task will be marked as complete indicated by green tick mark.
- Also included an enhancement to display the date of creation of the task as "Created on Nov 21, 2023"

Enhancements

1. GitHub Link Of the ToDo Application with the code repository, README and the document of steps to create the ToDo App.

https://github.com/raagashettybp/ToDo-App
